Title Page

Shapes

Table of Contents

Font: MetaOT

Miscellaneous Options

All options must be set when loading `OTHAWbeamer`, e.g.,

```
\documentclass[amwen]{OTHAWbeamer}
```

`amberg` Title page with picture of the Amberg campus

`weiden` Title page with picture of the Weiden campus

`amwen` Title page with picture of both campuses

`white` Title page with no picture (default¹)

`orange` Title page with orange bar

When using the `white` option, one can adjust the width of the title with, e.g.,

```
\setlength{\titlepagetitlewidth}{\dimexpr\textwidth - 2cm}
```

¹This indicates the default option if no (other) option is specified

The new corporate design template employs several abstract shapes.
They are enabled by default, but can be disabled at wish.

(no)titlesshapes (Disable) Shapes on title page

(no)thankyoushapes (Disable) Shapes on thank you page

(no)breakshapes (Disable) Shapes on break page

(no)shapes (Disable) Shapes altogether
(shorthand for options mentioned above)

Table of Contents (TOCs) I

Newly Added Options

autotoc Automatic TOC generation at start of new sections

noautotoc Disable this feature (default)

Use macro `\inserttoc` outside a `frame` environment to insert a TOC.

The style of the TOC can be varied using the following options:

Table of Contents (TOCs) I

Newly Added Options

autotoc Automatic TOC generation at start of new sections

noautotoc Disable this feature (default)

Use macro `\inserttoc` outside a `frame` environment to insert a TOC.

The style of the TOC can be varied using the following options:

toc=normal Single-column corporate design TOC (default)

toc=twocolumn Two-column corporate design TOC

toc=fancy Single-column, fancy TOC with support for subsections²

toc=legacy Disable all new TOC features and use the previous style

²See this presentation for reference

Table of Contents (TOCs) II

Newly Added Options

There are more options to customize the style of the TOC.

They can be used in combination with the options shown on the previous slide:

`toc=cdstyle` Use corporate design TOC style (default)

`toc=altstyle` Use a slightly modified version of corporate design TOC style
(bold and shaded text for other sections)

`(no)squeezetoc` (Disable) Whitespace removal and font size adjustment to fit more
elements in TOC (use when there are five or more entries per column)

Font: MetaOT

General information

OTH Amberg-Weiden corporate design uses *MetaOT* as main font.

However, there are two problems:

1. it is not free (as in: there is a licensing fee)
2. it is only available in TTF format

Font: MetaOT

General information

OTH Amberg-Weiden corporate design uses *MetaOT* as main font.

However, there are two problems:

1. it is not free (as in: there is a licensing fee)
2. it is only available in TTF format

The “solution” is two-fold:

Students No access to *MetaOT*

→ specify option `nometao` when using the `OTHAWbeamer` class

Staff Access to *MetaOT*'s TTF files

→ Compiling with `pdf(La)TeX`: specify option `nometao`

→ Compiling with `Lua(La)TeX` or `Xe(La)TeX`: *MetaOT* is used by default

Font: MetaOT

General information

OTH Amberg-Weiden corporate design uses *MetaOT* as main font.

However, there are two problems:

1. it is not free (as in: there is a licensing fee)
2. it is only available in TTF format

The “solution” is two-fold:

Students No access to *MetaOT*

→ specify option `nometao` when using the `OTHAWbeamer` class

Staff Access to *MetaOT*'s TTF files

→ Compiling with `pdf(La)TeX`: specify option `nometao`

→ Compiling with `Lua(La)TeX` or `Xe(La)TeX`: *MetaOT* is used by default

Option `ignoremetaot` disables all error messages regarding *MetaOT* font and will print warnings instead.

Font: MetaOT

Changes in Version 0.05e

- 0. Previous behavior: `OTHAWbeamer` loads MetaOT files with names
 - ▶ MetaOT.ttf³, MetaOT-Bold.ttf
- 1. Starting from version 0.05e, class `OTHAWbeamer` loads italic font shapes automatically, when it detects their presence
 - ▶ Filenames: MetaOT-Ita.ttf, MetaOT-BoldIta.ttf
- 2. Version 0.05e introduced a new option `condensedmetaot`
 - ▶ Loads MetaOT-Cond.ttf, MetaOT-CondBold.ttf by default
 - ▶ Additionally loads MetaOT-CondIta.ttf, MetaOT-CondBoldIta.ttf if present

Examples: **bold italic bold italic**

³If the underlined font file is detected, `OTHAWbeamer` assumes the presence of the second font file, too!

Font: MetaOT – Numberstyle

Changes in Version 0.05f

- Option `numberstyle=old` for old-style numbers
- Option `numberstyle=inline` for new-style numbers
- Option `numberstyle=pageref-inline` for old-style numbers, except for page numbering in the bottom right corner (default)

Example:

old	inline
0123456789	0123456789

Miscellaneous Options

Changes and Descriptions

aspectratio=XYZ Default changed to 169; can still be overridden

Miscellaneous Options

Changes and Descriptions

aspectratio=XYZ Default changed to 169; can still be overridden

lecture When given, displays the subtitle in footer

annotate When given, frames in `annotation` or `erlaeuterung` environments are written to output PDF, otherwise omitted

Miscellaneous Options

Changes and Descriptions

aspectratio=XYZ Default changed to 169; can still be overridden

lecture When given, displays the subtitle in footer

annotate When given, frames in `annotation` or `erlaeuterung` environments are written to output PDF, otherwise omitted

indicatelastrpageofframe Colorizes the frame counter on the last page of each frame.
This is helpful when using frames with many animation steps.⁴

It is possible colorize the frame counter only for multi-page frames⁵ by defining

```
\def\indicatelastrpageofframeminpages{1}
```

⁴See this frame for reference; only when all the content is displayed, the frame counter turns orange

⁵See this presentation for reference; only for frames with multiple pages, the frame counter turns orange

Miscellaneous Options

Included and Extended for Compatibility

tochead Displays a (small) table of contents above a frame's title

notochead Disables tochead (default)

notes Generates handouts and disables all animations;
also disables `indicatelastpageofframe`;
does not show automatically generated table of contents

notes=withautotoc Same as notes, but show automatically generated TOCs

notes=withsquaredgrid Same as notes, but generate A4 pages with squared grid lines
for personal notes

footlinebox Activates a colored box behind the footline

nofootlinebox Disables a colored box behind the footline, i.e. making it
transparent (default)

Changes in Version 0.06a

Options & Repository

compressedtitleimages When using title page designs amberg, weiden or amwen, lower-quality JPG-files are used to reduce presentation file size

Repository Removal of (legacy) ./bin/ folder and Makefile script;
For building \LaTeX presentations with OTHAWbeamer use latexmk
Consider using Hephaistos:

Docker <https://hub.docker.com/r/othawemi/hephaistos>

Container-Source <https://git.oth-aw.de/latex-tools/hephaistos>

VS-Code-Devcontainer <https://git.oth-aw.de/latex-tools/hephaistos-vscode>

03 | Demo Pages

Background Image and White Logo

Annotations

Empty Frame Titles

Macro `\logowhite` changes the OTH-AW logo to white *for all following slides*.
Use `\logocolor` to switch back to the colored version of the OTH-AW logo.
Alternatively, use a `\TeX` group to apply changes only locally (see code).

**However, using a background image is generally not advised
as text legibility is significantly worse!**

Changing the color of the footline is also possible (see code).

It is also possible to display custom information between (sub)title and date using the `\additionalfootlinecontent` macro.

If the *frametitle* is empty, no title and no orange line are displayed in the top left corner.

Use this for large diagrams.

However, if you specify `\frametitle{()}`,
the title not displayed but it affects layout⁶.

Use this when your diagram obstructs the OTH logo.

⁶The next slide has a title, but notice how the layout is not affected

Now with text

And even more text

However, if you specify `\frametitle{()}`,
the title not displayed but it affects layout⁶.

Use this when your diagram obstructs the OTH logo.

⁶ This slide has a title, but notice how the layout is not affected

Demo Page #1

Subsubsections work in `toc=fancy`, too,
but do not make their title too long
Second subsubsection

Demo Page #2

Break Pages (Newly Added Stuff)

Colors

Warnings

You can safely delete all frames before using this template

You can safely delete all frames before using this template

Important Stuff

Always use a subtitle to make things look beautiful

Title of this block

Very important content: $E = mc^2$

This is a break frame

Use it to plan breaks during your presentation

OTH Corporate Design Color Scheme

orange1 250,125,25 #FA7D19	blau1 0,103,159 #00679F	cyan1 31,177,204 #1FB1CC	gruen1 69,177,121 #45B179	lila1 108,53,128 #6C3580	grau1 83,85,90 #53555A
orange2 252,177,117 #FCB175	blau2 102,164,197 #66A4C5	cyan2 121,208,224 #79DoEo	gruen2 143,208,175 #8FD0AF	lila2 167,134,179 #A786B3	grau2 152,153,156 #98999C

orange4 254,229,209 #FEE5D1	blau4 204,225,236 #CCE1EC	cyan4 210,239,245 #D2EFF5	gruen4 218,239,228 #DAEFE4	lila4 226,215,230 #E2D7E6	grau4 221,221,222 #DDDDDE

This is a very, very long title to demonstrate what can go wrong whilst making a plea to the user

Don't do that
